# **TROPIC01**

ODU\_TR01 - User API

Version: 1.3.0

Git tag:

Tropic Square September 3, 2025

## **Version history**

Version	Date	Author	Description
Tag			
0.1	9.1.2023	Ondrej Ille	Initial API version.
0.2	26.1.2023	Ondrej Ille	Add CFG_START_UP CO.
0.3	13.3.2023	Ondrej Ille	Add <b>DATA_IN*</b> fields to <i>Ping</i> . Add ranges
			to field sizes. Change <b>Get_Serial_Code</b> to
			Serial_Code_Get.
0.4	28.3.2023	Ondrej Ille	Fix <b>Get_Info_Req</b> chunk size. Fix
			<b>R_Mem_Data_*</b> command size
			to 444 Bytes. Add padding to
			ECDSA_Sign, EDDSA_Sign, Attest_Key_*
			and <i>MAC_And_Destroy</i> . Update
			CMD_ID values to be non-linear. Add
			Attest_Key_Read L3 Command Definition.
			Add CFG_UAP_ATTEST_KEY_READ CO.
			Change adressing of COs to be non-linear
			and to correspond to order of <b>CMD_ID</b>
0.5	10.4.2022	Oradina: III a	fields.
0.5	18.4.2023	Ondrej Ille	Use enumerated values with bullets for
0.6	10.4.2022	On dua: III a	possible values of protocol fields.
0.6	19.4.2023	Ondrej Ille	Rename Attestation Keys to ECC Keys. Rename related L3 commands and COs.
0.7	28.4.2023	Ondrej Ille	Add <b>ECC_Key_Erase</b> and
0.7	20.4.2023	Ondrej ilie	CFG_UAP_ECC_KEY_ERASE.
0.8	16.5.2023	Prasoon	Fix <b>Encrypted_Cmd_Abt</b> options. Fix
0.0	10.5.2025	Dwivedi	CFG_UAP_ECC_KEY_ERASE CO fields.
0.9	24.5.2023	Henri L'Hote	Add missing <b>SLOT EXPIRED</b> to
0.3	2 1.3.2023	1101111 211000	R_Mem_Data_Write. Typo fixes.
0.10	19.6.2023	Henri L'Hote	Removed <b>UDATA_LEN</b> from
			R_Mem_Data_Read.
0.11	26.6.2023	Ondrej Ille	Change CO addresses so that functional
			COs and configuration COs are in contigu-
			ous address regions. Change <b>ADDRESS</b> of
			L3 Commands that modify config to two
			bytes.
0.12	27.7.2023	Candice Lam	Grammar check. Consistency fix.
0.13	15.9.2023	Jarda Hrabalek	Add start-up specific commands.

Mari		A	Beautiful a
Version	Date	Author	Description
<b>Tag</b> 0.14	18.9.2023	Ondrej Ille	Remove <b>CFG_ALARM_MODE</b> CO. Change
0.1 1	10.5.2023	orial cy inc	polarity of bits in <b>CFG_START_UP</b> . Remove
			CFG_STARTUP[MBIST].
0.15	1.2.2024	Ondrej Ille	Add <b>CFG_STARTUP[MBIST_DIS]</b> ,
			CFG_STARTUP[RNGTEST_DIS],
			CFG_STARTUP[MAINTENANCE_ENA],
			CFG_STARTUP[CPU_FW_VERIFY_DIS] and
			CFG_STARTUP[SPECT_FW_VERIFY_DIS].
0.16	6.2.2024	Candice Lam	Grammar check. Consistency fix.
0.17	1.3.2024	Ondrej Ille	Add SLEEP_KIND=DEEP
			SLEEP_MODE. Add
			CFG_SLEEP_MODE[DEEP_SLEEP_MODE_EN]
			CO. Encode <b>SLEEP_KIND</b> more meaningfully.
0.18	7.3.2024	Ondrej Ille	Rework <b>CFG_SENSORS</b> to the latest state of
0.10	7.5.2024	Ondregille	Alarms. Flip its polarity.
0.19	14.3.2024	Ondrej Ille	Add <b>CFG_DEBUG</b> CO. And <b>Get_Log_Req</b> .
0.20	26.3.2024	Ondrej Ille	Clarify <b>PKEY_INDEX</b> starts from 0. Change
			COs that refer to Pairing Key Slots to be in-
			dexed from 0.
0.21	3.5.2024	Ondrej Ille	Extend <b>Ping</b> size to 4096 bytes.
0.22	15.5.2024	Adam Vrba	Modify Slot Numbering to be consistently
		Ondrej Ille	from 0. Add <b>Pairing_Key_Invalidate</b> . Add
			CFG_UAP_PAIRING_KEY_INVALIDATE.
0.23	15.5.2024	Ondrej Ille	Swap "CFG" and "FUNC" in
			CFG_(R I)_CONFIG_* COs. For
			CFG_R_CONFIG_ERASE remove split
0.24	42.6.202.4		completely.
0.24	13.6.2024	Adam Vrba	Add padding to all L3 Commands / Re-
			sults. Rename <b>Encrypted_Cmd_Abt</b> to
0.25	28.8.2024	Ondrej Ille	Encrypted_Session_Abt Add CFG_START_UP[RFU_1] bit.
1.0	4.10.2024	Jarda Hrabalek	Change L2 API for secured FW
1.0	7.10.2024	Jarua Firabalek	update. Changed commands
			Mutable_FW_Update*_
1.0.1	12.11.2024	Jarda Hrabalek	Update L2 API FW header structure.
	1	Jan da i ii dodiek	TP State LE / 11 11 11 11 11 11 11 11 11 11 11 11 1

Version Tag	Date	Author	Description
1.0.2	18.11.2024	Adam Vrba	Remove <b>CPU_FW_VERIFY_DIS</b> and
			SPECT_FW_VERIFY_DIS fields from
			CFG_START_UP.
1.0.3	26.11.2024	Jarda Hrabalek	Update API <b>Get_Info_Req</b>
1.0.4	5.12.2024	Ondrej Ille	Remove CFG_UAP_SERIAL_CODE_GET.
1.1.0	11.12.2024	Adam Vrba	Split the API to bootloader and application
			parts.
1.1.2	21.2.2025	Olha Harielina	Remove DEEP_SLEEP_MODE from L2 API.
1.2.0	11.4.2025	Adam Vrba	Add GPO pin function modes <b>CFG_GPO</b>
1.3.0	18.6.2025	Adam Vrba	Change minimum size of EdDSA sign MSG
			field to 0.

5	User Configuration Objects 5.1 Bootloader	
6	Open Issues	67

### 1 Glossary

• **API**: Application Processing Interface

**CO**: Configuration Object

• CRC : Cyclic Redundancy Check

• EdDSA: Edwards Curve Digital Signature Algorithm

• ECDSA: Elliptic Curve Digital Signature Algorithm

**FW**: Firmware

• I-Config : Irreversible Config

■ **MCU** : Microcontroller

• R-Config : Reversible Config

**ROM**: Read Only Memory

### 2 Introduction

This document describes TROPIC01's API:

- L2 Layer communication unit definitions Request and Response frames
- L3 Layer communication unit definitions Command and Result packets
- Configuration Objects (CO) The memory layout of the Reversible Config (R-Config) and Irreversible Config (I-Config)

#### Note

Each CO has a single address.

#### Note

Tropic Square might write bits in I-Config COs during manufacturing. As a result, TROPIC01 might provide limited configuration options.

#### Note

To read the L2 Response frame, Host MCU issues L2 Request frame with **REQ\_ID** == **Get\_Response** = **0xAA**. For detailed information about the L2 communication layer, refer to Datasheet.

### 3 Bootloader API

Parameter	Description
Information	
Name	Get_Info_Req
Description	Request to obtain information about TROPIC01.
API function name	get_info_req
Request	
REQ_ID	0x01
REQ_LEN	0x02
REQ_DATA	(length: 2 byte(s))
OBJECT_ID	
Description	The Identifier of the requested object.
Size	1
Possible values	• X509_CERTIFICATE (0x00): The X.509 Certificate Store (object size 3840B).
	• <b>CHIP_ID</b> (0x01): The chip ID - the chip silicon revision and unique device ID (object size 128B).
	• <b>RISCV_FW_VERSION</b> (0x02): Current version of Immutable
	FW (object size 4B)
	<ul> <li>SPECT_FW_VERSION (0x04): The SPECT bootloader is a part of RISC-V bootloader. Returns dummy value. (object size 4B)</li> <li>FW_BANK (0xb0): The FW header read from the FW bank defined by BLOCK_INDEX choices (object size 128B).</li> </ul>
BLOCK_INDEX	defined by BEOCK_INDEX choices (object size 120b).
Description Description	X509_CERTIFICATE: index of the 128B certificate block 0 - 29 FW_BANK: enumeration of possible values defined for this field CHIP_ID, *_FW_VERSION: do not care
Size	1
Possible values	• CPU_BANK_1 (0x01): RISC-V FW bank 1
1 ossible values	• CPU_BANK_2 (0x02): RISC-V FW bank 2 • SPECT_BANK_1 (0x11): SPECT FW bank 1 • SPECT_BANK_2 (0x12): RISC-V FW bank 2
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x01 - 0x80
RSP_DATA	(length: 1 - 128 byte(s))
OBJECT	

Description	The data content of the requested object block.
Size	1 - 128
RSP_CRC	(length: 2 bytes)

Table 1: Get\_Info\_Req syntax

Parameter	Description
Information	
Name	Resend_Req
Description	Request for TROPIC01 to resend the last L2 Response.
API function name	resend_req
Request	
REQ_ID	0x10
REQ_LEN	0x00
REQ_DATA	(length: 0 byte(s))
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))
RSP_CRC	(length: 2 bytes)

Table 2: Resend\_Req syntax

Parameter	Description
Information	
Name	Startup_Req
Description	Request for TROPIC01 to reset.
API function name	startup_req
Request	
REQ_ID	0xb3
REQ_LEN	0x01
REQ_DATA	(length: 1 byte(s))
STARTUP_ID	
Size	1
Possible values	• <b>REBOOT</b> (0x01): Restart, then initialize as if a power-cycle
	was applied.
	• MAINTENANCE_REBOOT (0x03): Restart, then initialize. Stay
	in Start-up mode and do not load the mutable FW from R-
	Memory.
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))
RSP_CRC	(length: 2 bytes)

Table 3: Startup\_Req syntax

Parameter	Description
Information	
Name	Mutable_FW_Update_Req
Description	Request to start updating mutable FW.
	Supported only in Start-up mode (i.e. after Startup_Req with
	MAINTENANCE_REBOOT).
	Possible update only same or newer version.
	NOTE SIX II I
	NOTE: Chip automatically select memory space for FW
ADI function name	storage and erase it.
API function name	mutable_fw_update_req
Request	050
REQ_ID	0xb0
REQ_LEN	0x68
REQ_DATA	(length: 104 byte(s))
SIGNATURE	Signature of SUADEC back of all fallousing data in this market
Description	Signature of SHA256 hash of all following data in this packet.
Size	64
HASH	SUADEG HASH of first FW shupk of data contusing Mutable
Description	SHA256 HASH of first FW chunk of data sent using Mutable FW_Update_Data.
Size	32
TYPE	52
Description	FW type which is going to be updated.
Size	2
Possible values	• FW_TYPE_CPU (0x01): FW for RISC-V main CPU.
	• FW_TYPE_SPECT (0x02): FW for SPECT coprocessor.
PADDING	
Description	Zero value.
Size	1
HEADER_VERSION	
Description	Current value is 1.
Size	1
VERSION	
Size	4
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))

**RSP\_CRC** (length: 2 bytes)

Table 4: Mutable\_FW\_Update\_Req syntax

Version: 1.3.0 Page: 12 Git commit: 30f1f88

Parameter	Description	
Information		
Name	Mutable_FW_Update_Data_Req	
Description	Request to write a chunk of the new mutable FW to a R-	
	Memory bank.	
	Supported only in Start-up mode after Mutable_FW_Update	
	Req successfully processed.	
API function name	mutable_fw_update_data_req	
Request		
REQ_ID	0xb1	
REQ_LEN	0x26 - 0xfe	
REQ_DATA	(length: 38 - 254 byte(s))	
HASH		
Description	SHA256 HASH of the next FW chunk of data sent using Muta-	
	ble_FW_Update_Data.	
Size	32	
OFFSET		
Description	The offset of the specific bank to write the FW chunk data to.	
Size	2	
DATA		
Description	The binary data to write. Data size should be a multiple of 4.	
Size	4 - 220	
REQ_CRC	(length: 2 bytes)	
Response		
RSP_LEN	0x00	
RSP_DATA	(length: 0 byte(s))	
RSP_CRC	(length: 2 bytes)	

Table 5: Mutable\_FW\_Update\_Data\_Req syntax

Parameter	Description
Information	
Name	Get_Log_Req
Description	Get debug log message (for internal development purpose
	only).
	Note: Logging is irreversibly disabled during provisioning.
API function name	get_log_req
Request	
REQ_ID	0xa2
REQ_LEN	0x00
REQ_DATA	(length: 0 byte(s))
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00 - 0xfc
RSP_DATA	(length: 0 - 252 byte(s))
LOG_MSG	
Description	Debug log message
Size	0 - 252
RSP_CRC	(length: 2 bytes)

Table 6: Get\_Log\_Req syntax

## 4 Application API

## 4.1 L2 Request / Response frames

	Description	
Information		
Name	Get_Info_Req	
Description	Request to obtain information about TROPIC01. The type of information obtained is distinguished by OBJECT_ID.	
	NOTE: If Start-up mode is active, TROPIC01 executes the immutable FW. Any version identification then has the highest bit set to 1.  SPECT_FW_VERSION then returns a dummy value of	
	0x80000000 because the SPECT FW is part of the immutable FW.	
API function name	get_info_req	
Request		
REQ_ID	0x01	
REQ_LEN	0x02	
REQ_DATA	(length: 2 byte(s))	
OBJECT_ID		
Description	The Identifier of the requested object.	
Size	1	
Possible values	• <b>X509_CERTIFICATE</b> (0x00): The X.509 Certificate Store read from I-Memory and signed by Tropic Square.	
	• <b>CHIP_ID</b> (0x01): The chip ID - the chip silicon revision and unique device ID (max length of 128B).	
	• <b>RISCV_FW_VERSION</b> (0x02): The RISCV current running FW version (4 Bytes)	
	• <b>SPECT_FW_VERSION</b> (0x04): The SPECT FW version (4 Bytes)	
BLOCK_INDEX		
Description	In case the requested object is larger than 128B use chunk number.  First chunk has index 0 and maximum value is 29 for 3840B  Certificate Store.	
Size	1	
REQ_CRC	(length: 2 bytes)	
Response		

Version: 1.3.0 Page: 15

Git commit: 30f1f88

RSP_LEN	0x01 - 0x80
RSP_DATA	(length: 1 - 128 byte(s))
OBJECT	
Description	The data content of the requested object block.
Size	1 - 128
RSP_CRC	(length: 2 bytes)

Table 7: Get\_Info\_Req syntax

Version: 1.3.0 Page: 16 Git commit: 30f1f88

Parameter	Description
Information	
Name	Handshake_Req
Description	Request to execute a Secure Channel Handshake and establish a new Secure Channel Session (TROPIC01 moves to Secure Channel Mode).
API function name	handshake_req
Request	
REQ_ID	0x02
REQ_LEN	0x21
REQ_DATA	(length: 33 byte(s))
E_HPUB	
Description	The Host MCU's Ephemeral X25519 public key. A little endian encoding of the x-coordinate from the public Curve25519 point.
Size	32
PKEY_INDEX	
Description	The index of the Pairing Key slot to establish a Secure Channel Session with (TROPIC01 fetches $S_{HiPub}$ from the Pairing Key slot specified in this field).
Size	1
Possible values	• PAIRING_KEY_SLOT_0 (0x00): Corresponds to $S_{H0Pub}$ . • PAIRING_KEY_SLOT_1 (0x01): Corresponds to $S_{H1Pub}$ . • PAIRING_KEY_SLOT_2 (0x02): Corresponds to $S_{H2Pub}$ . • PAIRING_KEY_SLOT_3 (0x03): Corresponds to $S_{H3Pub}$ .
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x30
RSP_DATA	(length: 48 byte(s))
E_TPUB	
Description	TROPIC01's X25519 Ephemeral key.
Size	32
T_TAUTH	
Description	The Secure Channel Handshake Authentication Tag.
Size	16
RSP_CRC	(length: 2 bytes)

Table 8: Handshake\_Req syntax

Version: 1.3.0 Page: 17 Git commit: 30f1f88

Parameter	Description		
Information			
Name	Encrypted_Cmd_Req		
Description	Request to execute an L3 Command.		
API function name	encrypted_cmd_req		
Request			
REQ_ID	0x04		
REQ_LEN	0x01 - 0xfc		
REQ_DATA	(length: 1 - 252 byte(s))		
L3_CHUNK	L3_CHUNK		
Description	The encrypted L3 command or a chunk of it.		
Size	1 - 252		
REQ_CRC	(length: 2 bytes)		
Response			
RSP_LEN	0x01 - 0xfc		
RSP_DATA	(length: 1 - 252 byte(s))		
L3_CHUNK			
Description	The encrypted L3 result or a chunk of it.		
Size	1 - 252		
RSP_CRC	(length: 2 bytes)		

Table 9: Encrypted\_Cmd\_Req syntax

Parameter	Description
Information	
Name	Encrypted_Session_Abt_Req
Description	Request to abort current Secure Channel Session and execu-
	tion of L3 command (TROPIC01 moves to Idle Mode).
API function name	encrypted_session_abt_req
Request	
REQ_ID	0x08
REQ_LEN	0x00
REQ_DATA	(length: 0 byte(s))
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))
RSP_CRC	(length: 2 bytes)

Table 10: Encrypted\_Session\_Abt\_Req syntax

Parameter	Description
Information	
Name	Resend_Req
Description	Request for TROPIC01 to resend the last L2 Response.
API function name	resend_req
Request	
REQ_ID	0x10
REQ_LEN	0x00
REQ_DATA	(length: 0 byte(s))
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))
RSP_CRC	(length: 2 bytes)

Table 11: Resend\_Req syntax

Parameter	Description
Information	
Name	Sleep_Req
Description	Request for TROPIC01 to go to Sleep Mode.
API function name	sleep_req
Request	
REQ_ID	0x20
REQ_LEN	0x01
REQ_DATA	(length: 1 byte(s))
SLEEP_KIND	
Description	The type of Sleep mode TROPIC01 moves to.
Size	1
Possible values	• SLEEP_MODE (0x05): Sleep Mode
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))
RSP_CRC	(length: 2 bytes)

Table 12: Sleep\_Req syntax

Parameter	Description
Information	
Name	Startup_Req
Description	Request for TROPIC01 to reset.
API function name	startup_req
Request	
REQ_ID	0xb3
REQ_LEN	0x01
REQ_DATA	(length: 1 byte(s))
STARTUP_ID	
Size	1
Possible values	• <b>REBOOT</b> (0x01): Restart, then initialize as if a power-cycle
	was applied.
	• MAINTENANCE_REBOOT (0x03): Restart, then initialize. Stay
	in Start-up mode and do not load the mutable FW from R-
	Memory.
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00
RSP_DATA	(length: 0 byte(s))
RSP_CRC	(length: 2 bytes)

Table 13: Startup\_Req syntax

Parameter	Description
Information	
Name	Get_Log_Req
Description	Get log from FW running on RISCV CPU.
API function name	get_log_req
Request	
REQ_ID	0xa2
REQ_LEN	0x00
REQ_DATA	(length: 0 byte(s))
REQ_CRC	(length: 2 bytes)
Response	
RSP_LEN	0x00 - 0xff
RSP_DATA	(length: 0 - 255 byte(s))
LOG_MSG	
Description	Log message of RISCV FW.
Size	0 - 255
RSP_CRC	(length: 2 bytes)

Table 14: Get\_Log\_Req syntax

### 4.2 L3 Commands / Result packets

Parameter	Description
Information	
Name	Ping
Description	A dummy command to check the Secure Channel Session com-
	munication.
API function name	ping
Command	
CMD_SIZE	0x01 - 0x1001
CMD_ID	0x01
CMD_DATA	(length: 0 - 4096 byte(s))
DATA_IN	
Description	The input data
Size	0 - 4096
Result	
RES_SIZE	0x01 - 0x1001
RESULT	(1 Byte)
RES_DATA	(length: 0 - 4096 byte(s))
DATA_OUT	
Description	The output data (loopback of the <b>DATA_IN</b> field).
Size	0 - 4096

Table 15: Ping syntax

Parameter	Description
Information	
Name	Pairing_Key_Write
Description	Command to write the X25519 public key to a Pairing Key slot.
API function name	pairing_key_write
Command	
CMD_SIZE	0x24
CMD_ID	0x10
CMD_DATA	(length: 35 byte(s))
SLOT	
Description	The Pairing Key slot. Valid values are 0 - 3.
Size	2
Possible values	• PAIRING_KEY_SLOT_0 (0x00): Corresponds to $S_{H0Pub}$ .
	• PAIRING_KEY_SLOT_1 (0x01): Corresponds to $S_{H1Pub}$ .
	• PAIRING_KEY_SLOT_2 (0x02): Corresponds to $S_{H2Pub}$ .
	• PAIRING_KEY_SLOT_3 (0x03): Corresponds to $S_{H3Pub}$ .
PADDING	
Description	The padding by dummy data.
Size	1
S_HIPUB	
Description	The X25519 public key to be written in the Pairing Key slot spec-
	ified in the SLOT field.
Size	32
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
RES_DATA	(length: 0 byte(s))

Table 16: Pairing\_Key\_Write syntax

Parameter	Description
Information	
Name	Pairing_Key_Read
Description	Command to read the X25519 public key from a Pairing Key
	slot.
API function name	pairing_key_read
Command	
CMD_SIZE	0x03
CMD_ID	0x11
CMD_DATA	(length: 2 byte(s))
SLOT	
Description	The Pairing Key slot. Valid values are 0 - 3.
Size	2
Possible values	• PAIRING_KEY_SLOT_0 (0x00): Corresponds to $S_{H0Pub}$ .
	• PAIRING_KEY_SLOT_1 (0x01): Corresponds to $S_{H1Pub}$ .
	• PAIRING_KEY_SLOT_2 (0x02): Corresponds to $S_{H2Pub}$ .
	• PAIRING_KEY_SLOT_3 (0x03): Corresponds to $S_{H3Pub}$ .
Result	
RES_SIZE	0x24
RESULT	(1 Byte)
Possible values	<ul> <li>PAIRING_KEY_EMPTY (0x15): The Pairing key slot is in "Blank" state. A Pairing Key has not been written to it yet.</li> <li>PAIRING_KEY_INVALID (0x16): The Pairing key slot is in "Invalidated" state. The Pairing key has been invalidated.</li> </ul>
RES_DATA	(length: 35 byte(s))
PADDING	
Description	The padding by dummy data.
Size	3
S_HIPUB	
Description	The X25519 public key to be written in the Pairing Key slot spec-
	ified in the SLOT field.
Size	32

Table 17: Pairing\_Key\_Read syntax

Parameter	Description
Information	
Name	Pairing_Key_Invalidate
Description	Command to invalidate the X25519 public key in a Pairing Key
	slot.
API function name	pairing_key_invalidate
Command	
CMD_SIZE	0x03
CMD_ID	0x12
CMD_DATA	(length: 2 byte(s))
SLOT	
Description	The Pairing Key slot. Valid values are 0 - 3.
Size	2
Possible values	• <b>PAIRING_KEY_SLOT_0</b> (0x00): Corresponds to $S_{H0Pub}$ .
	• <b>PAIRING_KEY_SLOT_1</b> (0x01): Corresponds to $S_{H1Pub}$ .
	• <b>PAIRING_KEY_SLOT_2</b> (0x02): Corresponds to $S_{H2Pub}$ .
	• <b>PAIRING_KEY_SLOT_3</b> (0x03): Corresponds to $S_{H3Pub}$ .
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
RES_DATA	(length: 0 byte(s))

Table 18: Pairing\_Key\_Invalidate syntax

Parameter	Description
Information	
Name	R_Config_Write
Description	Command to write a single CO to R-Config.
API function name	r_config_write
Command	
CMD_SIZE	0x08
CMD_ID	0x20
CMD_DATA	(length: 7 byte(s))
ADDRESS	
Description	The CO address offset for TROPIC01 to compute the actual CO
	address.
Size	2
PADDING	
Description	The padding by dummy data.
Size	1
VALUE	
Description	The CO value to write in the computed address.
Size	4
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
RES_DATA	(length: 0 byte(s))

Table 19: R\_Config\_Write syntax

Parameter	Description
Information	
Name	R_Config_Read
Description	Command to read a single CO from R-Config.
API function name	r_config_read
Command	
CMD_SIZE	0x03
CMD_ID	0x21
CMD_DATA	(length: 2 byte(s))
ADDRESS	
Description	The CO address offset for TROPIC01 to compute the actual CO
	address.
Size	2
Result	
RES_SIZE	0x08
RESULT	(1 Byte)
RES_DATA	(length: 7 byte(s))
PADDING	
Description	The padding by dummy data.
Size	3
VALUE	
Description	The CO value TROPIC01 read from the computed address.
Size	4

Table 20: R\_Config\_Read syntax

Parameter	Description
Information	
Name	R_Config_Erase
Description	Command to erase the whole R-Config (convert the bits of all
	CO to 1).
API function name	r_config_erase
Command	
CMD_SIZE	0x01
CMD_ID	0x22
CMD_DATA	(length: 0 byte(s))
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
RES_DATA	(length: 0 byte(s))

Table 21: R\_Config\_Erase syntax

Parameter	Description
Information	
Name	I_Config_Write
Description	Command to write a single bit of CO (from I-Config) from 1 to
	0.
API function name	i_config_write
Command	
CMD_SIZE	0x04
CMD_ID	0x30
CMD_DATA	(length: 3 byte(s))
ADDRESS	
Description	The CO address offset for TROPIC01 to compute the actual CO
	address.
Size	2
BIT_INDEX	
Description	The bit to write from 1 to 0. Valid values are 0-31.
Size	1
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
RES_DATA	(length: 0 byte(s))

Table 22: I\_Config\_Write syntax

Parameter	Description
Information	
Name	I_Config_Read
Description	Command to read a single CO from I-Config.
API function name	i_config_read
Command	
CMD_SIZE	0x03
CMD_ID	0x31
CMD_DATA	(length: 2 byte(s))
ADDRESS	
Description	The CO address offset for TROPIC01 to compute the actual CO
	address.
Size	2
Result	
RES_SIZE	0x08
RESULT	(1 Byte)
RES_DATA	(length: 7 byte(s))
PADDING	
Description	The padding by dummy data.
Size	3
VALUE	
Description	The CO value TROPIC01 read from the computed address.
Size	4

Table 23: I\_Config\_Read syntax

Parameter	Description
Information	
Name	R_Mem_Data_Write
Description	Command to write general purpose data in a slot from the
	User Data partition in R-Memory.
API function name	r_mem_data_write
Command	
CMD_SIZE	0x05 - 0x1c0
CMD_ID	0x40
CMD_DATA	(length: 4 - 447 byte(s))
UDATA_SLOT	
Description	The slot of the User Data partition. Valid values are 0 - 511.
Size	2
PADDING	
Description	The padding by dummy data.
Size	1
DATA	
Description	The data stream to be written in the slot specified in the
	UDATA_SLOT L3 field.
Size	1 - 444
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
Possible values	• WRITE_FAIL (0x10): The slot is already written in.
RES_DATA	(length: 0 byte(s))

Table 24: R\_Mem\_Data\_Write syntax

Parameter	Description	
Information		
Name	R_Mem_Data_Read	
Description	Command to read the general purpose data from a slot of the	
	User Data partition in R-Memory.	
API function name	r_mem_data_read	
Command		
CMD_SIZE	0x03	
CMD_ID	0x41	
CMD_DATA	(length: 2 byte(s))	
UDATA_SLOT	UDATA_SLOT	
Description	The slot of the User Data partition. Valid values are 0 - 511.	
Size	2	
Result		
RES_SIZE	0x04 - 0x1c0	
RESULT	(1 Byte)	
RES_DATA	(length: 3 - 447 byte(s))	
PADDING		
Description	The padding by dummy data.	
Size	3	
DATA		
Description	The data stream read from the slot specified in the UDATA	
	SLOT L3 field.	
Size	0 - 444	

Table 25: R\_Mem\_Data\_Read syntax

Parameter	Description
Information	
Name	R_Mem_Data_Erase
Description	Command to erase a slot from the User Data partition in R-
	Memory.
API function name	r_mem_data_erase
Command	
CMD_SIZE	0x03
CMD_ID	0x42
CMD_DATA	(length: 2 byte(s))
UDATA_SLOT	
Description	The slot of the User Data partition. Valid values are 0 - 511.
Size	2
Result	
RES_SIZE	0x01
RESULT	(1 Byte)
RES_DATA	(length: 0 byte(s))

Table 26: R\_Mem\_Data\_Erase syntax

Parameter	Description		
Information			
Name	Random_Value_Get		
Description	Command to get random numbers generated by TRNG2.		
API function name	random_value_get		
Command			
CMD_SIZE	0x02		
CMD_ID	0x50		
CMD_DATA	(length: 1 byte(s))		
N_BYTES			
Description	The number of random bytes to get.		
Size	1		
Result			
RES_SIZE	0x04 - 0x103		
RESULT	(1 Byte)		
RES_DATA	(length: 3 - 258 byte(s))		
PADDING			
Description	The padding by dummy data.		
Size	3		
RANDOM_DATA	RANDOM_DATA		
Description	The random data from TRNG2 in the number of bytes specified		
	in the <b>N_BYTES</b> field.		
Size	0 - 255		

Table 27: Random\_Value\_Get syntax

Parameter	Description	
Information		
Name	ECC_Key_Generate	
Description	Command to generate an ECC Key and store the key in a slot	
	from the ECC Keys partition in R-Memory.	
API function name	ecc_key_generate	
Command		
CMD_SIZE	0x04	
CMD_ID	0x60	
CMD_DATA	(length: 3 byte(s))	
SLOT		
Description	The slot to write the generated key. Valid values are 0 - 31.	
Size	2	
CURVE		
Description	The Elliptic Curve the key is generated from.	
Size	1	
Possible values	• <b>P256</b> (0x01): P256 Curve - 64-byte long public key.	
	• <b>ED25519</b> (0x02): Ed25519 Curve - 32-byte long public key.	
Result		
RES_SIZE	0x01	
RESULT	(1 Byte)	
RES_DATA	(length: 0 byte(s))	

Table 28: ECC\_Key\_Generate syntax

Parameter	Description	
Information		
Name	ECC_Key_Store	
Description	Command to store an ECC Key in a slot from the ECC Keys par-	
	tition in R-Memory.	
API function name	ecc_key_store	
Command		
CMD_SIZE	0x30	
CMD_ID	0x61	
CMD_DATA	(length: 47 byte(s))	
SLOT		
Description	The slot to write the <b>K</b> field. Valid values are 0 - 31.	
Size	2	
CURVE		
Description	The Elliptic Curve the key is generated from.	
Size	1	
Possible values	• <b>P256</b> (0x01): P256 Curve - 64-byte long public key.	
	• <b>ED25519</b> (0x02): Ed25519 Curve - 32-byte long public key.	
PADDING		
Description	The padding by dummy data.	
Size	12	
K		
Description	The ECC Key to store. The key must be a member of the field	
	given by the curve specified in the <b>CURVE</b> field.	
Size	32	
Result		
RES_SIZE	0x01	
RESULT	(1 Byte)	
RES_DATA	(length: 0 byte(s))	

Table 29: ECC\_Key\_Store syntax

Parameter	Description	
Information		
Name	ECC_Key_Read	
Description	Command to read the public ECC Key from a slot of the ECC	
_	Keys partition in R-Memory.	
API function name	ecc_key_read	
Command		
CMD_SIZE	0x03	
CMD_ID	0x62	
CMD_DATA	(length: 2 byte(s))	
SLOT		
Description	The slot to read the public ECC Key from. Valid values are 0 - 31.	
Size	2	
Result		
RES_SIZE	0x30 - 0x50	
RESULT	(1 Byte)	
Possible values	• INVALID_KEY (0x12): The key in the requested slot does not	
	exist.	
RES_DATA	(length: 47 - 79 byte(s))	
CURVE		
Description	The type of Elliptic Curve public key returned.	
Size	1	
Possible values	• <b>P256</b> (0x01): P256 Curve - 64-byte long public key.	
	• <b>ED25519</b> (0x02): Ed25519 Curve - 32-byte long public key.	
ORIGIN		
Description	The origin of the key.	
Size	1	
Possible values	• ECC_Key_Generate (0x01): The key is from key generation	
	on the device.	
	• <b>ECC_Key_Store</b> (0x02): The key is from key storage in the	
DADDING	device.	
PADDING	The median by dynamic data	
Description	The padding by dummy data.	
Size	13	
PUB_KEY	The multipline frame the ECC Manual stress of Cold Stress	
Description	The public key from the ECC Key slot as specified in the <b>SLOT</b> field.	
Size	32 - 64	
3120	52	

Table 30: ECC\_Key\_Read syntax

Version: 1.3.0 Page: 40 Git commit: 30f1f88

Parameter	Description	
Information		
Name	ECC_Key_Erase	
Description	Command to erase an ECC Key from a slot in the ECC Keys	
	partition in R-Memory.	
API function name	ecc_key_erase	
Command		
CMD_SIZE	0x03	
CMD_ID	0x63	
CMD_DATA	(length: 2 byte(s))	
SLOT		
Description	The slot to erase. Valid values are 0 - 31.	
Size	2	
Result		
RES_SIZE	0x01	
RESULT	(1 Byte)	
RES_DATA	(length: 0 byte(s))	

Table 31: ECC\_Key\_Erase syntax

Parameter	Description	
Information		
Name	ECDSA_Sign	
Description	Command to sign a message hash with an ECDSA algorithm.	
API function name	ecdsa_sign	
Command		
CMD_SIZE	0x30	
CMD_ID	0x70	
CMD_DATA	(length: 47 byte(s))	
SLOT		
Description	The slot (from the ECC Keys partition in R-Memory) to read the key for ECDSA signing.	
Size	2	
PADDING	2	
	The madding by dynamy data	
Description Size	The padding by dummy data.  13	
MSG HASH	13	
Description	The hash of the message to sign (max size of 32 bytes).	
Size	32	
Result		
RES_SIZE	0x50	
RESULT	(1 Byte)	
Possible values	• INVALID_KEY (0x12): The key in the requested slot does not	
	exist, or is invalid.	
RES_DATA	(length: 79 byte(s))	
PADDING		
Description	The padding by dummy data.	
Size	15	
R		
Description	ECDSA signature - The R part	
Size	32	
S		
Description	ECDSA signature - The S part	
Size	32	

Table 32: ECDSA\_Sign syntax

Parameter	Description	
Information		
Name	EDDSA_Sign	
Description	Command to sign a message with an EdDSA algorithm.	
API function name	eddsa_sign	
Command		
CMD_SIZE	0x10 - 0x1010	
CMD_ID	0x71	
CMD_DATA	(length: 15 - 4111 byte(s))	
SLOT		
Description	The slot (from the ECC Keys partition in R-Memory) to read the key for EdDSA signing.	
Size	2	
PADDING		
Description	The padding by dummy data.	
Size	13	
MSG		
Description	The message to sign (max size of 4096 bytes).	
Size	0 - 4096	
Result		
RES_SIZE	0x50	
RESULT	(1 Byte)	
Possible values	• INVALID_KEY (0x12): The key in the requested slot does not	
	exist, or is invalid.	
RES_DATA	(length: 79 byte(s))	
PADDING		
Description	The padding by dummy data.	
Size	15	
R		
Description	EdDSA signature - The R part	
Size	32	
S		
Description	EdDSA signature - The S part	
Size	32	

Table 33: EDDSA\_Sign syntax

Parameter	Description	
Information		
Name	MCounter_Init	
Description	Command to initialize the Monotonic Counter.	
API function name	mcounter_init	
Command		
CMD_SIZE	0x08	
CMD_ID	0x80	
CMD_DATA	(length: 7 byte(s))	
MCOUNTER_INDEX		
Description	The index of the Monotonic Counter to initialize. Valid values are 0 - 15.	
Size	2	
PADDING		
Description	The padding by dummy data.	
Size	1	
MCOUNTER_VAL		
Description	The initialization value of the Monotonic Counter.	
Size	4	
Result		
RES_SIZE	0x01	
RESULT	(1 Byte)	
RES_DATA	(length: 0 byte(s))	

Table 34: MCounter\_Init syntax

Parameter	Description	
Information		
Name	MCounter_Update	
Description	Command to update the Monotonic Counter (decrement by	
	1).	
API function name	mcounter_update	
Command		
CMD_SIZE	0x03	
CMD_ID	0x81	
CMD_DATA	(length: 2 byte(s))	
MCOUNTER_INDEX		
Description	The index of the Monotonic Counter to update. Valid values	
	are 0 - 15.	
Size	2	
Result		
RES_SIZE	0x01	
RESULT	(1 Byte)	
Possible values	• <b>UPDATE_ERR</b> (0x13): Failure to update the specified Mono-	
	tonic Counter. The Monotonic Counter is already at 0.	
	• <b>COUNTER_INVALID</b> (0x14): The Monotonic Counter detects	
	an attack and is locked. The counter must be reinitialized.	
RES_DATA	(length: 0 byte(s))	

Table 35: MCounter\_Update syntax

Parameter	Description		
Information			
Name	MCounter_Get		
Description	Command to get the value of the Monotonic Counter.		
API function name	mcounter_get		
Command			
CMD_SIZE	0x03		
CMD_ID	0x82		
CMD_DATA	(length: 2 byte(s))		
MCOUNTER_INDEX	MCOUNTER_INDEX		
Description	The index of the Monotonic Counter to get the value of. Valid		
	index values are 0 - 15.		
Size	2		
Result			
RES_SIZE	0x08		
RESULT	(1 Byte)		
Possible values	• COUNTER_INVALID (0x14): The Monotonic Counter detects		
	an attack and is locked. The counter must be reinitialized.		
RES_DATA	(length: 7 byte(s))		
PADDING			
Description	The padding by dummy data.		
Size	3		
MCOUNTER_VAL			
Description	The value of the Monotonic Counter specified by the		
	MCOUNTER_INDEX field.		
Size	4		

Table 36: MCounter\_Get syntax

Parameter	Description	
Information		
Name	MAC_And_Destroy	
Description	Command to execute the MAC-and-Destroy sequence.	
API function name	mac_and_destroy	
Command		
CMD_SIZE	0x24	
CMD_ID	0x90	
CMD_DATA	(length: 35 byte(s))	
SLOT		
Description	The slot (from the MAC-and-Destroy data partition in R-	
	Memory) to execute the MAC_And_Destroy sequence. Valid	
	values are 0 - 127.	
Size	2	
PADDING		
Description	The padding by dummy data.	
Size	1	
DATA_IN		
Description	The data input for the MAC-and-Destroy sequence.	
Size	32	
Result		
RES_SIZE	0x24	
RESULT	(1 Byte)	
RES_DATA	(length: 35 byte(s))	
PADDING		
Description	The padding by dummy data.	
Size	3	
DATA_OUT		
Description	The data output from the MAC-and-Destroy sequence.	
Size	32	

Table 37: MAC\_And\_Destroy syntax

## **5 User Configuration Objects**

Bootloader and Application shares the memory range of I/R-Config in defined non-volatile memory.

## 5.1 Bootloader

Address Offset	Register Name	Reset Value
0x0	CFG_START_UP	0x000000F
0x8	CFG_SENSORS	0x0003FFFF
0x10	CFG_DEBUG	0x0000001
0x14	CFG_GPO	0x0000001

Register name:		CFG_START_UP			
Address offset:		0x0			
Field	Туре	Reset value	Bits	Description	
RFU_1	RW W1C	0x1	0:0	Reserved for future use 1	
MBIST_DIS	RW W1C	0x1	1:1	Configuration of the mutable FW test during start-up. If the test fails, TROPIC01 enters Alarm Mode.  TEST_ON: 0x0: Self test executed.  TEST_OFF: 0x1: Self test skipped.	
RNGTEST_DIS	RW W1C	0x1	2:2	PTRNG test configuration in Start-up mode.  TEST_ON: 0x0: PTRNG Test is executed. If failed,  TROPIC01 enters Alarm Mode.  TEST_OFF: 0x1: PTRNG Test is skipped.	
MAINTENANCE_ENA	RW W1C	0x1	3:3	Configuration of Maintenance restart.  MAINTENANCE_FORBIDDEN: 0x0: Maintenance restart is forbidden.  MAINTENANCE_ALLOWED: 0x1: Maintenance restart is allowed.	

Register name:		CFG_SENSORS			
Address offset:		0x8	0x8		
Field	Туре	Reset Bits Description value		Description	
PTRNG0_TEST_DIS	RW W1C	0x1	0:0	TROPIC01 behavior when TRNG0 detects low entropy or error on internal redundancy encodings.  NO_ACTION: 0x1: No action ENTER_ALARM_MODE: 0x0: Enter Alarm Mode.	

DTDNG4 TEST DIS	I DIA/	10.4	1 4 . 4	TDODICOA I de la companya della companya della companya della companya de la companya della comp
PTRNG1_TEST_DIS	RW	0x1	1:1	TROPIC01 behavior when TRNG1 detects low entropy or
	W1C			error on internal redundancy encodings.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
OSCILLATOR_MON_DIS	RW	0x1	2:2	TROPIC01 behavior when its internal oscillator detects too
	W1C			low frequency.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
SHIELD_DIS	RW	0x1	3:3	TROPIC01 behavior when its top metal layer active shield
	W1C			detects tampering or an error on internal redundancy enc-
				doings.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
VOLTAGE_MON_DIS	RW	0x1	4:4	TROPIC01 behavior when its voltage monitor detects over-
	W1C			voltage or undervoltage on VCC.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
GLITCH_DET_DIS	RW	0x1	5:5	TROPIC01 behavior when its glitch detector detects a glitch
	W1C			on VCC.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
TEMP_SENS_DIS	RW	0x1	6:6	TROPIC01 behavior when its temperature sensor detects
	W1C			overtemperature or undertemperature.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.

TROPIC01 ODU\_TR01 - User API

LASER_DET_DIS	RW	0x1	7:7	TROPIC01 behavior when its laser detector detects an laser
	W1C			attack.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
EM_PULSE_DET_DIS	RW	0x1	8:8	TROPIC01 behavior when its Electromagnetic Pulse de-
	W1C			tects an laser attack.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
CPU_ALERT_DIS	RW	0x1	9:9	TROPIC01 behavior when its RISCV CPU detects an attack
	W1C			on its memories, register file or instruction pipeline.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
PIN_VERIF_BIT_FLIP_DIS	RW	0x1	10:10	TROPIC01 behavior when its Pin Verification engine de-
	W1C			tects bit flip on its redundancy encoding mechanisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
SCB_BIT_FLIP_DIS	RW	0x1	11:11	TROPIC01 behavior when its Secure Channel Block detects
	W1C			bit flip on its redundancy encoding mechanisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
CPB_BIT_FLIP_DIS	RW	0x1	12:12	TROPIC01 behavior when its Command Processing Block
	W1C			detects bit flip on its redundancy encoding mechanisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
ECC_BIT_FLIP_DIS	RW	0x1	13:13	TROPIC01 behavior when its ECC engine detects bit flip on
	W1C			its redundancy encoding mechanisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
1				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.

Page: 51

	1	1	1	
R_MEM_BIT_FLIP_DIS	RW	0x1	14:14	TROPIC01 behavior when its R Memory controller detects
	W1C			bit flip on its redundancy encoding mechanisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
EKDB_BIT_FLIP_DIS	RW	0x1	15:15	TROPIC01 behavior when its Entropy and Key distribution
	W1C			engine detects bit flip on its redundancy encoding mecha-
				nisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
I_MEM_BIT_FLIP_DIS	RW	0x1	16:16	TROPIC01 behavior when its I Memory controller detects
	W1C			bit flip on its redundancy encoding mechanisms.
				NO_ACTION : 0x1 : No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.
PLATFORM_BIT_FLIP_DIS	RW	0x1	17:17	TROPIC01 behavior when its platform management logic
	W1C			(silicon life-cycle and SoC control) detects bit flip on its re-
				dundancy encoding mechanisms.
				NO_ACTION: 0x1: No action
				ENTER_ALARM_MODE : 0x0 : Enter Alarm Mode.

WRITE_PKEY_SLOT_2	RW W1C	0xFF	23:16	Access privileges of the <i>Pairing_Key_Write</i> L3 Command packet to Pairing Key slot 2.	

WRITE_PKEY_SLOT_3	RW	0xFF	31:24	Access privileges of the <i>Pairing_Key_Write</i> L3 Command
	W1C			packet to Pairing Key slot 3.

Register name:		CFG_UAI	P_PAIRING	G_KEY_READ	
Address offset:		0x24	0x24		
Field	Туре	Reset value	Bits	Description	
READ_PKEY_SLOT_0	RW W1C	0xFF	7:0	Access privileges of the <i>Pairing_Key_Read</i> L3 Command packet to Pairing Key slot 0.	
READ_PKEY_SLOT_1	RW W1C	0xFF	15:8	Access privileges of the <i>Pairing_Key_Read</i> L3 Command packet to Pairing Key slot 1.	
READ_PKEY_SLOT_2	RW W1C	0xFF	23:16	Access privileges of the <i>Pairing_Key_Read</i> L3 Command packet to Pairing Key slot 2.	
READ_PKEY_SLOT_3	RW W1C	0xFF	31:24	Access privileges of the <i>Pairing_Key_Read</i> L3 Command packet to Pairing Key slot 3.	

Register name:		CFG_UAP	_PAIRING	G_KEY_INVALIDATE
Address offset:	Address offset: 0x28			
Field	Туре	Reset value	Bits	Description
INVALIDATE_PKEY_SLOT_0	RW W1C	0xFF	7:0	Access privileges of the <i>Pairing_Key_Invalidate</i> L3 Command packet to Pairing Key slot 0.
INVALIDATE_PKEY_SLOT_1	RW W1C	0xFF	15:8	Access privileges of the <i>Pairing_Key_Invalidate</i> L3 Command packet to Pairing Key slot 1.
INVALIDATE_PKEY_SLOT_2	RW W1C	0xFF	23:16	Access privileges of the <i>Pairing_Key_Invalidate</i> L3 Command packet to Pairing Key slot 2.

	<b>.</b>
m-	j,

INVALIDATE_PKEY_SLOT_3	RW	0xFF	31:24	Access privileges of the <i>Pairing_Key_Invalidate</i> L3 Com-
	W1C			mand packet to Pairing Key slot 3.

Register name:	Register name:		CFG_UAP_R_CONFIG_WRITE_ERASE			
Address offset:	0x30					
Field	Type	Reset value	Bits	Description		
R_CONFIG_WRITE_ERASE	RW W1C	0xFF	7:0	Access privileges of the R_Config_Write and <b>R_Config_Erase</b> L3 Command packets to all COs. Refer to the 'User Access Privileges' section in the TROPIC01 Datasheet.		

Register name:		CFG_UAP	CFG_UAP_R_CONFIG_READ			
Address offset:		0x34	0x34			
Field	Type	Reset	Bits	Description		
		value				
R_CONFIG_READ_CFG	RW	0xFF	7:0	Access privileges of the <b>R_Config_Read</b> L3 Command		
	W1C			packet to the Configuration COs. Refer to the 'User Access		
				Privileges' section in the TROPIC01 Datasheet.		
R_CONFIG_READ_FUNC	RW	0xFF	15:8	Access privileges of the <b>R_Config_Read</b> L3 Command		
	W1C			packet to the Functionality COs. Refer to the 'User Access		
				Privileges' section in the TROPIC01 Datasheet.		

Register name:	CFG_UAP_I_CONFIG_WRITE
Address offset:	0x40

Field	Туре	Reset value	Bits	Description
I_CONFIG_WRITE_CFG	RW W1C	0xFF	7:0	Access privileges of the <i>I_Config_Write</i> L3 Command packet to the Configuration COs. Refer to the 'User Access Privileges' section in the TROPIC01 Datasheet.
I_CONFIG_WRITE_FUNC	RW W1C	0xFF	15:8	Access privileges of the <i>I_Config_Write</i> L3 Command packet to the Functionality COs. Refer to the 'User Access Privileges' section in the TROPIC01 Datasheet.

Register name:		CFG_UAF	P_I_CONF	FIG_READ
Address offset:		0x44		
Field	Туре	Reset	Bits	Description
		value		
I_CONFIG_READ_CFG	RW	0xFF	7:0	Access privileges of the <i>I_Config_Read</i> L3 Command packet
	W1C			to the Configuration COs. Refer to the 'User Access Privi-
				leges' section in the TROPIC01 Datasheet.
I_CONFIG_READ_FUNC	RW	0xFF	15:8	Access privileges of the <i>I_Config_Read</i> L3 Command packet
	W1C			to the Functionality COs. Refer to the 'User Access Privi-
				leges' section in the TROPIC01 Datasheet.

Register name:		CFG_UAP_PING		
Address offset:		0x100		
Field	Туре	Reset Bits Description value		
PING	RW W1C	0xFF	7:0	Access privileges of the <b>Ping</b> L3 Command packet.

Register name:		CFG_UAP	CFG_UAP_R_MEM_DATA_WRITE			
Address offset:		0x110	0x110			
Field	Type	Reset value	Bits	Description		
WRITE_UDATA_SLOT_0_127	RW W1C	0xFF	7:0	Access privileges of the <b>R_Mem_Data_Write</b> L3 Command packet to slots 0 - 127 of the User Data partition in R-Memory.		
WRITE_UDATA_SLOT_128_255	RW W1C	0xFF	15:8	Access privileges of the <b>R_Mem_Data_Write</b> L3 Command packet to slots 128 - 255 of the User Data partition in R-Memory.		
WRITE_UDATA_SLOT_256_383	RW W1C	0xFF	23:16	Access privileges of the <b>R_Mem_Data_Write</b> L3 Command packet to slots 256 - 383 of the User Data partition in R-Memory.		
WRITE_UDATA_SLOT_384_511	RW W1C	0xFF	31:24	Access privileges of the <b>R_Mem_Data_Write</b> L3 Command packet to slots 384 - 511 of the User Data partition in R-Memory.		

Register name:		CFG_UAP	CFG_UAP_R_MEM_DATA_READ
